LOG STACKING

PALLETIZING

PERFECT AUTOMATION FOR ALL COPY FORMATS

The compact log palletizer PL 700 takes the logs arriving from the log stacker and places them on the pallet according to the format of the copies and the preset pallet pattern. If necessary it is possible to turn the logs by 90 or 180 degrees. Various options, as for example the slipsheet feeder, a pallet transport system or a pallet dispenser will increase the palletizer's flexibility. The clear structure of the operating panel facilitates setting of the required parameters.

PL 700

Features

- Transfer table
- Metal protecting fence all around the machine
- Easy positioning control
- Rotary gripper

Options

- Slipsheet feeder with slipsheet magazine
- Pallet transport system
- Pallet dispenser with automatic pallet change
- Remote diagnosis and maintenance by VPN

Advantages

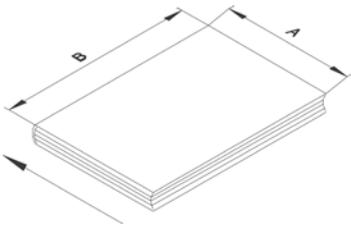

- Safe, exact and fast control-system
- High productivity and flexibility
- Low space requirements
- Solid design
- Short installation- and startup times
- Easy, graphic supported operation
